

Aim: Spring Boot with Rest API and CRUD Operations

The screenshot shows a database management interface with a 'SCHEMAS' panel on the left, a 'Query 1' editor in the center, and a 'Result Grid' at the bottom. The 'SCHEMAS' panel lists databases like 'bookflow_db', 'college_emp', 'company_db', 'db2', 'employee_db_2', and 'kluh'. The 'Query 1' editor contains the SQL query: `SELECT * FROM kluh.products;`. The 'Result Grid' displays the following data:

id	name	description	price	quantity
1	Laptop	Dell XPS 13	1200	10
2	Smartphone	Samsung Galaxy S21	999	20
3	Tablet	Apple iPad Pro	799	15
4	Laptop	Dell XPS 13	1200	10
5	Smartphone	Samsung Galaxy S21	999	20
6	Tablet	Apple iPad Pro	799	15
*	NULL	NULL	NULL	NULL

On the right side of the interface, a message states: 'Automatic context help is disabled. Use the toolbar to manually get help for the current caret position or to toggle automatic help.'

The screenshot shows the project explorer of an IDE, displaying the file structure of a Spring Boot application. The structure is as follows:

- studentbackend [boot] [devtools]
 - week8_co3 [boot] [devtools]
 - src/main/java
 - com.example
 - Week8Co3Application.java
 - com.example.controller
 - ProductController.java
 - com.example.entity
 - Product.java
 - com.example.repository
 - ProductRepository.java
 - com.example.service
 - ProductService.java
 - ProductServiceImpl.java
 - src/main/resources
 - static
 - templates
 - application.properties
 - src/test/java
 - JRE System Library [JavaSE-17]
 - Maven Dependencies
 - src
 - target
 - HELP.md
 - mvnw
 - mvnw.cmd
 - pom.xml
